GEO 391 Climate Systems Discussion Current Literature

This is a reading class for graduate students. It addresses current issues in climate change. Future climate change is emphasized but students may delve into other topics. Students do assigned or self-chosen reading assignments and provide frequent class reports.

Undergraduates may take this course as GEO 371 with permission of instructors, i.e., if they have sufficient maturity and interest and subject to class size limitation.

Grading is based on the quality of these reports and contributions to the discussion of other reports.
